
MAPETROL

PREMIUM SCREENWASHER WINTER -20°C NANO

SCREENWASHER NANO consists of nano-particles, which are formed by polymeric compound. One part of nano-particle forms chemical ion bond with treated surface and the second is orientated at opposite direction. Following this fact "intelligent film" is created above the surface. Modified surface obtains new properties: • repulsive of water, dirt, oils • increase of shine • long-term protection against pollution • improvement visibility at night and on a rainy day • prevention sedimentation fly on windscreen • antistatic properties prohibit dust settling
