
MAPETROL

KALOL 22

KALOL 22 is the hardening oil of premium quality. Products are formulated so as to provide good cooling and eliminate cracks and deformations in metalworking by tempering, with long term use due to the low evaporability of oil and resistance to aging. Recommended for all types of steel tempering: hardened steel ball bearings, Mn-Si steels for springs, alloy steel, etc. Optimum results for KALOL 22 can be achieved with a cooling temperature of 30-50°C.
